

Detailed description of our current products

## elmeg CS290

### The price/performance reference for ISDN system telephony

The perfect system telephone for standard workstations: Greatest ease of use with 3 softkeys, alphanumeric display and 5 freely programmable function keys. Optimal readability of the display thanks to the adjustable base. Ideal for frequent phone users; a dedicated jack for using headsets is already installed.

### Ringling-LED

Useful in loud environments: Each call is indicated acoustically by a particularly powerful speaker and also optically by a bright ringing LED.

### System Highlights

- System-specific alphanumeric telephone directory
- Transmission of text messages (UUS1, SMS)
- Programmable function keys
  - Busy lamp panel with extension / line buttons
  - Receiving messages
  - Announcement
  - Voice mail button for external Voice Mail Systems
  - Login key for team membership
  - Headset button
  - Autom. call pick-up function key (for use with headsets)
  - Day/ night mode
  - Team log-on/off

### User Interface

The tried-and-tested menu prompting provided by elmeg system telephones of the 300 series forms the basis for this. A new feature is large, easy-to-press function keys with luminous glass fibers integrated into the key bodies for even more transparency. Bi-color LEDs are also provided for some keys. This is to indicate the status at both function levels.

### The elmeg CS290 supports system features with the following pbx-systems:

- elmeg D@VOS-44.net  
(Firmware version 5.5 or higher)
- elmeg D@VOS-44.dsl  
(Firmware version 1.0 or higher)
- elmeg C48.net  
(firmware version 5.5 or higher)
- elmeg C46xe \*
- elmeg C46xe-rack \*

as of: August 11, 2005 – subject to modifications

## Detailed description of our current products

- elmeg C88m Up0 \*  
(firmware version 5.4 or higher)
- elmeg ICT-family

### Headset

We recommend using headsets from Plantronics with a U10P-S connecting cable and from GN-Netcom.

#### Special feature:

elmeg CS290 supports the On indicator in the Firefly F142N headset. This is plugged directly into the headset jack of the elmeg CS290 (U10P-S connecting cable not required).

### Accessories

#### ➔ UP0/S0-module (converter)

- The existing Up0 jack is used as an input, the S0 jack as an output for connecting other S0 terminal devices.

### Features

A detailed table listing all of the performance features is available on the Internet for downloading at [www.elmeg.de](http://www.elmeg.de).

elmeg CS290 is available in the colors black-blue and ice gray.

\*) no transmission of text messages (SMS) possible

as of: August 11, 2005 – subject to modifications
